INTRODUCTION

Who We Are ?

ELZIO is a Blockchain technology company. Our mission is to accelerate the mass adoption of digital assets by bridging traditional and decentralized finance. We develop solutions that connect businesses, financial Institutions with distributed ledger systems. Our core technology is a next generation Blockchain infrastructure called ELZIO.

ELZIO enable lower transaction fees, faster confirmations, more efficiency, and global reach.

ELZIO, the next frontier of finance.

What is DeFi?

DeFi stands for Decentralized Finance. It enables a global, open alternative to every financial service you use today — savings, loans, trading, insurance and more — accessible to anyone in the world with a smartphone and internet connection.

The world's financial system needs upgrading. In an age of increasing globalization, money transfers still rely on outdated legacy systems. Payment solutions and financial services require numerous intermediaries and are often siloed. Most forms of currency are issued and controlled by centralized governments.

Bitcoin vs Traditional Finance

Ten years ago Bitcoin emerged as an alternative global payment system. Its value proposition is fairly simple: instead of the traditional reliance on centralized banks and third-parties, Bitcoin provides a decentralized, open, and peer-to-peer payment system.

Since its creation in 2008, Bitcoin's evolution as an asset class has two distinct phases:

- 1) Discovery Phase - lasted until around 2014 with the emergence of more exchanges and custodians, which coincided with better security and liquidity
- 2) Structuring Phase – this current phase has ushered in a broad range of complementary technologies and services alongside Bitcoin's growing adoption

Decentralized Finance – The Fastest Growing Blockchain Infrastructure

DeFi has caught the attention of the crypto masses. Over the past year, there have been instances of volatile Ether price action, bugs being exploited in Ethereum protocols, and intense scrutiny over the value proposition of altcoins. Despite all this, DeFi infrastructure has continued to grow at a rapid pace and grow more robust over time.

The **DeFi** ecosystem has allowed users to carry out many of the activities which would traditionally be completed within the banking industry. Users can create deposits, earn interest, and both lend and borrow. But by transitioning these possibilities to a decentralized network has brought both greater transparency and greater accessibility. Those who may have faced insurmountable hurdles in the traditional financial system have been able to meet their demands in the DeFi ecosystem
